16-20 hour/day

Density

5-6 pl./m²

20K pl./AC

7.6 pl./m²

30K pl./AC

Characteristics

Plant height: 60-100 cm

Vegetative stage: 5 weeks

Seed to harvest: 65 - 85 days

THC Varieties

First Lady F1

Lab Profile

AVG Total THC	23% - 25%
Total Terpenes	1.88%
Top Terpenes	1. Farnesene 2. Myrcene 3. Ocimene

Plant Characteristics

Dry Flower Yield per plant	110 grams
Plant height at harvest	75 cm
Maturity time from seed to harvest	75 - 80 days
Type	Day-Neutral

Additional info

Breeder comment	Crops show desirable upright architecture, strong vigour, and excellent production of premium-quality flower.
-----------------	---

Miss Beauty F1

Lab Profile

AVG Total THC	22% - 24%
Total Terpenes	1.61%
Top Terpenes	1. Myrcene 2. Ocimene 3. Farnesene

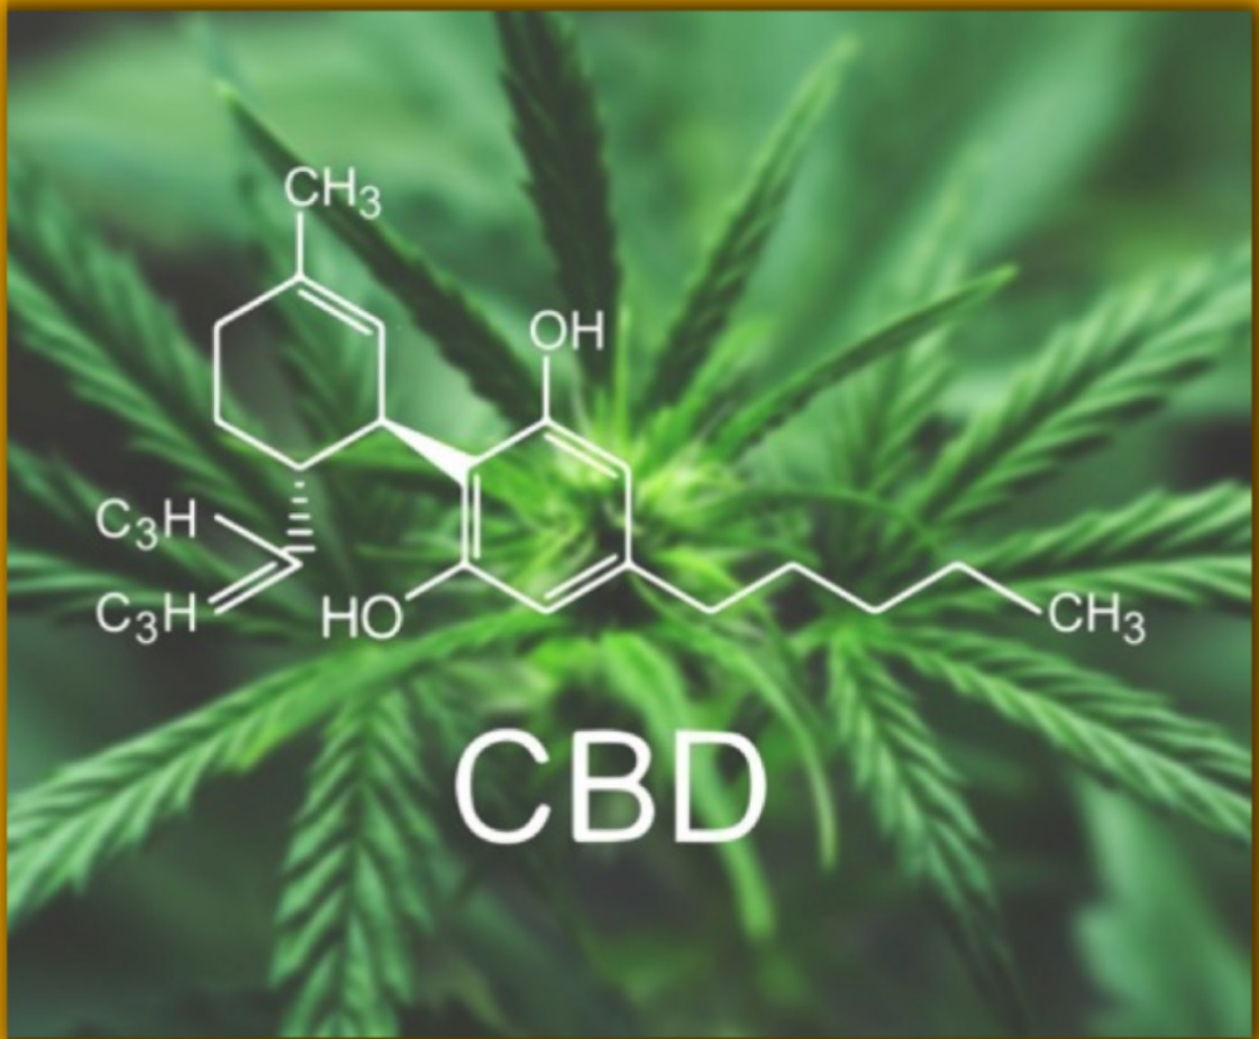

Plant Characteristics

Dry Flower Yield per plant	125 grams
Plant height at harvest	80 cm
Maturity time from seed to harvest	70 - 80 days
Type	Day-Neutral

Additional info

Breeder comment	Strong vigour, the highest total yielder per plant, and good tolerance against damaging fungus (Botrytis).
-----------------	--

CBD Varieties

Eugenius F1

Lab Profile

Total CBD	12% - 14%
CBD:THC Ratop	26:1
Top Terpenes	1. Myrcene 2. Caryophyllene 3. Limonene

Plant Characteristics

Purpose	Extraction
Plant height at harvest	< 100 cm
Maturity time from seed to harvest	70 - 80 days
Type	Day-Neutral

Additional info

Breeder comment	Outstanding seedling vigour and CBD:THC ratio. It is ideally suited for extraction, rather than trimmable flower.
